DETAILED ACTION

This Office Action is in response to a request for reconsideration filed November 18, 2003.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance. The prior art of record, Kahn (U.S. Patent No. 4,614, 961) and Pankovic (U.S. Patent No. 4,028,720) fail to teach, disclose, or suggest, either alone or in combination, at least on claim 2, a semiconductor light receiving element including a depletion layer formed under an electrode and which extends to cover an area around the electrode, wherein light enters the depletion layer from the side the electrode is formed and a total boundary lines between areas of the light receiving surface covered with a Schottky electrode and exposed areas is longer than the length of the outer periphery of the light receiving surface.

Khan discloses a depletion region under a Schottky barrier through a transparent substrate, as opposed to the depletion region claimed by Applicant. Kahn also teaches that the detected light enters the depletion region from a side opposite to that of which the Schottky barrier is formed. Pankove discloses a PN junction structure and fails to teach a total boundary lines between areas of the light receiving surface covered with a Schottky electrode and exposed areas is longer than the length of the outer periphery of the light receiving surface. Therefore, the claimed invention patentably distinguishes over that taught by the prior art and claims 1-7 are considered to be in condition for allowance.
